

Participant Information Sheet

A study investigating interactive interfaces for human interactive agentic AI research tools.

Thank you for your interest in this study. Before you decide to take part, it is important for you to understand why the research is being done and what it will involve. Please take time to read the following information carefully and discuss it with others if you wish. The study organiser is available if there is anything that is not clear or if you would like more information. Take time to decide whether or not you wish to take part.

Purpose of the study

This study aims to learn the key challenges and goals in building effective interfaces for interactive and interpretable agentic AI systems used in research settings.

Participants will be presented with an interface visualising a decision tree model and asked a series of questions about the model to understand how easy or difficult the interface makes interpreting the data in the tree.

Data collected will solely include participants' responses to these questions and basic interaction events captured by the prototype interfaces. Further details are provided below.

1. **Why have I been chosen?** You have been selected on Prolific as a good match for the study based on your self-reported demographics data.
2. **Do I have to take part?** No, participation is entirely voluntary. If you do decide to take part, you can still withdraw from the study at any time, without giving any reasons.
3. **Who is organising the study?** Adam Cheng and Dr John Dudley are organising the research study. They are based in the Engineering Department at the University of Cambridge.
4. **What will happen during the study?** You will be answering questions about a decision tree model as shown to you in an interactive interface. You will need to view and interact with this interface to answer these questions and your feedback on your experience will be elicited.
5. **What are the possible risks of taking part?** Participants could experience mild fatigue.
6. **What happens at the end of the study?** At the end of the study there will be a chance for you to provide any qualitative feedback that you may have.
7. **What will happen to the study results?** The results will be written up and published in academic papers and presented at research meetings.
8. **Anonymity – will I be identified in any publications resulting from the study?** The data will be anonymised and any references to the data will be done so that you are not identifiable.
9. **What if there is a problem?** If you have a concern about any aspect of this study, you should ask to speak to the researcher(s) who will do their best to answer your questions.
10. **Who has reviewed the study?** The Department of Engineering Ethics Committee has reviewed this study through the light-touch review process.
